

```
def print_multiples(n, limit, current=1):
    multiple = n * current

if multiple > limit:
    return

print(multiple)

print_multiples(n, limit, current + 1)

n = 3
limit = 30
print_multiples(n, limit)
```

En orden están, primero 1), segundo el 2 y tercero el 3;
